

Pakistan's first agentic scholarship intelligence system

Wazifa AI · وظیفہ

From document chaos to scholarship submission — automatically.

Android App

Google Antigravity

Gemini Vision

Urdu + English

Pakistan-specific

Challenge 1

10 REAL PROBLEMS WAZIFA SOLVES

No document record

Students lose marksheets, certificates, experience letters — scattered across folders and WhatsApp

Don't know what docs are needed

Every scholarship has different document requirements — no single source explains this for Pakistanis

Don't know which scholarships exist

HEC, PEEF, Chevening, DAAD, Fulbright, CSC, Türkiye — most students know only 1-2

Miss deadlines

Chevening opens August, Fulbright in May, DAAD in October — students miss entire cycles

IELTS or TOEFL confusion

Some need IELTS 6.5, some accept matric English medium certificate, some need nothing

Country & field confusion

China offers CSC for all fields, Australia Awards targets development professionals — students don't know

Fully vs partially funded

Students apply for partial scholarships they can't afford — wasting months of effort

Which universities offer scholarships

QAU, LUMS, IBA vs Oxford, TU Berlin — students don't know who offers what type

Best uni for their field

A CS student vs a public health student needs completely different university recommendations

Which docs to submit first

Getting domicile takes 2 weeks, police clearance 3 weeks — students don't plan the sequence

AGENT 1 - INGESTOR

Document Scanner Agent

User photographs marksheet, transcript, IELTS result, experience letter. Gemini Vision extracts CGPA, grades, test scores, dates — automatically.

Gemini Vision

OCR + extraction

Urdu/English docs

↓

AGENT 2 - MATCHER

Scholarship Match Agent

Compares extracted profile against Pakistan scholarship database (HEC, PEEF, Chevening, Fulbright, DAAD, CSC, Türkiye, Erasmus, Australia Awards + 40 more). Ranks by eligibility + funding level + deadline proximity + affordability.

Pakistan DB

Match scoring

Funding filter

Field filter

↓

AGENT 3 - GAP DETECTOR

Document Gap Analysis Agent

For each matched scholarship, determines exactly which documents are missing from the student's vault, how long each takes to obtain (domicile: 2 weeks, police clearance: 3 weeks), and in what sequence to apply for them.

Priority sequencing

Time estimation

Missing docs flagged

↓

AGENT 4 - ACTOR — CRITICAL FOR CHALLENGE 1

Action Execution Agent

Takes real actions — not suggestions. Simulates the full application pipeline with visible before/after system state.

Auto-fills mock form

Drafts professor email

Creates deadline calendar

Generates checklist

Logs every step

↓

AGENT 5 - MONITOR

Deadline & Reminder Agent

Runs in background. Sends push notifications: "Chevening closes in 14 days — you are missing police clearance." Tracks application progress. Updates dashboard state in real time.

Push notifications

Progress tracker

State updates

ⓘ Antigravity orchestrates all 5 agents. The reasoning trace (plan → decision → execution → outcome) is visible to judges live in the demo — this scores the 45% of marks that ScholarPath AI missed entirely.

ACTION SIMULATION — WHAT THE DEMO SHOWS (CHALLENGE 1 MANDATORY)

1 Input: student uploads marksheet photo

Agent 1 → extracted: CGPA 3.2, BS Computer Science, University of Punjab, 2024

2 Insight: top 3 matches identified

HEC Need-Based 94% • Fulbright HS 81% • DAAD Development 76%

3 Gap analysis: what is missing for Fulbright

Missing: GRE score • Police clearance • 2 recommendation letters • SOP draft

4 Action executed: professor email drafted & sent (simulated)

To: dr.ahmed@uop.edu.pk • Subject: Recommendation For Fulbright 2026 • [Student name, scholarship, deadline pre-filled]

5 Action executed: mock application form auto-filled

Name ✓ • CGPA ✓ • Field ✓ • University ✓ • Statement of Purpose [draft generated]

6 Outcome: before → after system state visible to judges

Before: 0 scholarships tracked, 0 docs uploaded • After: 3 matches, 1 email sent, form 60% complete, deadline: Oct 14

ALL APP MODULES

Doc vault

- Camera scan any document
- Auto-extracts all fields via Gemini Vision
- Handles Urdu + English + mixed docs
- Completeness score per document
- Version history (old vs new marksheet)

Scholarship finder

- 50+ Pakistan-relevant scholarships
- Filter: fully/partially/paid
- Filter: country, field, degree level
- Filter: IELTS required / not required
- Match % per scholarship

Gap radar

- Missing docs per scholarship
- Time-to-obtain each document
- Priority sequence (what to get first)
- Red / yellow / green urgency
- Auto-updates as docs added

Action engine

- Auto-drafts recommendation request email
- Simulates form fill with real student data
- Generates SOP opening paragraph
- Creates deadline calendar automatically
- Before/after state logged for judges

Deadline tracker

- All deadlines in one timeline
- Push notifications: 30, 14, 7, 3, 1 day
- Sub-deadlines (get domicile by Oct 1)
- Milestone roadmap per scholarship
- Urdu deadline summaries

University guide

- Best unis per field for Pakistanis
- Acceptance rate for Pakistani students
- What scholarships each uni offers
- Cost of living comparison
- Alumni Pakistan network info

Readiness dashboard

- Overall readiness % per scholarship
- Academic, language, docs, experience breakdown
- Antigravity agent trace visible
- Before/after state comparison
- One-tap share as PDF

Urdu interface

- Full Urdu UI toggle
- All explanations in Urdu
- Urdu voice output (text-to-speech)
- Roman Urdu input accepted
- Mixed-language document support

EXISTING TOOLS — AND WHY WAZIFA BEATS ALL OF THEM

Tool	Where it fails Pakistani students	Wazifa advantage
ScholarshipOwl	US-only scholarships, paid subscription, no Pakistani DB, English only	Pakistan scholarships, free, Urdu
Scholly / Sallie	US-only, no document vault, no agentic actions	Doc upload, action simulation, agents
Bold.org	US scholarships only, no gap analysis, English only	Gap radar, Pakistan-specific, Urdu
HEC Portal	Only HEC scholarships, no guidance, no deadlines, no intelligence	All 50+ scholarships, full agentic guidance
ScholarPath AI (Indonesia)	Manual form only, no doc upload, no action simulation, no Urdu, only one active scholarship	Camera scan, real actions, Urdu, multi-scholarship, agent trace
ChatGPT / Gemini	No memory, no Pakistani DB, no document tracking, no action execution, no notifications	Persistent vault, agentic pipeline, real actions, Pakistani context

PAKISTAN SCHOLARSHIP DATABASE (BUILT-IN, HARDCODED)

Local — government

HEC Need-Based, PEEF, Prime Minister's Laptop, Punjab Endowment Fund, Shahaen Foundation, Ehsaas Undergraduates

International — flagship

Fulbright (USA), Chevening (UK), DAAD (Germany), Erasmus+ (Europe), Australia Awards, CSC (China), Türkiye Bursları

University-level

Cambridge Commonwealth, Oxford Weidenfeld, ETH Zurich Excellence, KU Leuven, QAU, NUST merit awards

Development / sector

ADB-Japan, Aga Khan Foundation, Asian Development Bank, Commonwealth Scholarship, USAID-funded programs

ⓘ Each scholarship entry includes: field coverage, degree levels, funding type (full/partial), IELTS requirement, income limit, deadline cycle, required documents list, processing time, and Pakistan-specific acceptance notes. This is what no other tool has.

Pakistan context

Projected total score

93 / 100

ScholarPath AI (Indonesia) projected score on Challenge 1

~45 / 100

WHAT TO ACTUALLY BUILD FOR HACKATHON (SCOPED FOR 2 PEOPLE)

🕒 Must build for demo

Camera scan marksheet → extract profile
Match against 15-20 hardcoded scholarships
Show gap list per scholarship
Simulate: draft professor email
Simulate: fill mock application form
Deadline calendar with 3 scholarships
Agent trace panel (Antigravity logs)
Before/after dashboard state

🗺️ "Future roadmap" slide

Full 50+ scholarship database
Push notification system
Urdu voice output
SOP full draft generation
Interview preparation module
University ranking guide
Community success stories
Scholarship success prediction model

"Every other tool tells Pakistani students what scholarships exist. Wazifa's agents scan your documents, find your gaps, draft your emails, fill your forms, and remind you before deadlines close — in Urdu, for Pakistan, automatically."

Challenge 1 · Android · Google Antigravity · Gemini Vision · Pakistan-first

That's the complete system blueprint. A few critical things to understand as you move forward:

The single biggest thing that separates Wazifa from every existing tool — including ScholarPath AI — is the **action simulation chain**. Challenge 1 explicitly says "this is NOT a summarization tool" and gives 15% of marks purely to action execution. ScholarPath AI would score near zero on that criterion. Your email draft + form fill + calendar creation + before/after state covers it completely.

The **Pakistan scholarship database** hardcoded inside the app is your unfair advantage against any foreign tool. No American or Indonesian tool will have HEC Need-Based, PEEF, Ehsaas Undergraduate, Punjab Endowment Fund, and the specific IELTS thresholds for Chevening vs DAAD vs CSC for Pakistani applicants. Judges will instantly recognize these names and know this was built for them.

For the hackathon scope with two people, realistically focus on: camera scan working, 15 scholarships in the database, gap detection showing, and the action simulation (email + form) with the Antigravity trace visible. That alone wins Challenge 1. Everything else goes on the roadmap slide.
